

YOUR TITLE HERE

Student Name: Name1, Name2, Name3

Student ID: SID1, SID2, SID3

1. Introduction

Briefly introduce the topic you are choosing, the challenge in this area, etc.

2. Related works

Briefly introduce the related works that have been proposed.

3. Method

Two options:

- If you propose your own methods, describe here.
- If you are using methods that have been proposed, introduce the method with your own words (Don't copy & paste from the paper). Citation to the original paper is needed. Alternatively, if you make some improvement, **highlight** it and state them here.

4. Experiments

4.1 Datasets

Introduce the datasets you use here. (If you create your own datasets in OCR project, describe the process of dataset generation.)

4.2 Implementation Details

How you implement your model. For example, the hyper-parameters you use, the deep learning framework you use, etc.

4.3 Metrics

Briefly introduce the metrics you would use to assess your model performance in the experiments.

4.4 Experimental design & results

How you design your experiments. You should also report your experimental results here. Brief analysis of empirical results are needed.

You may add the visualizations of sample data here.

5. Conclusion

(**What** challenge you tackle with **what** method? **How** well your method is?)

Reference

The reference to the cited paper is needed.
